

A Analysis Framework

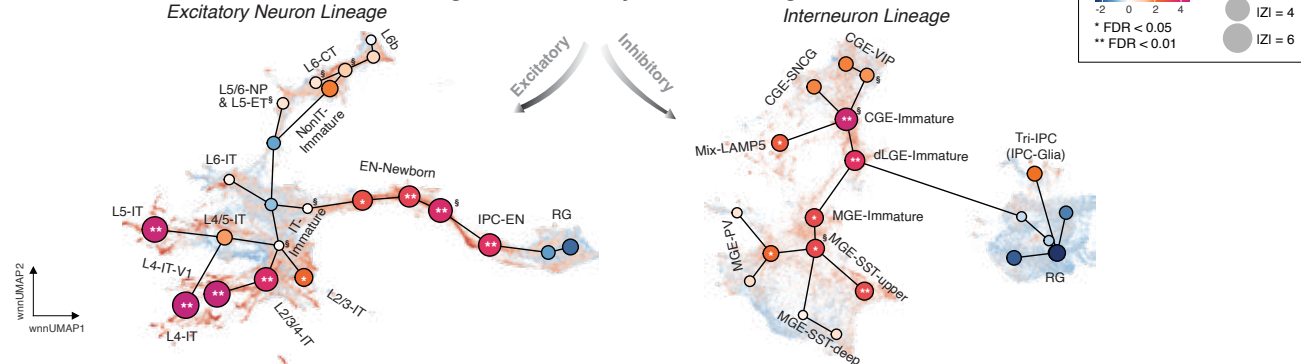

B Developing human brain multi-omic atlas

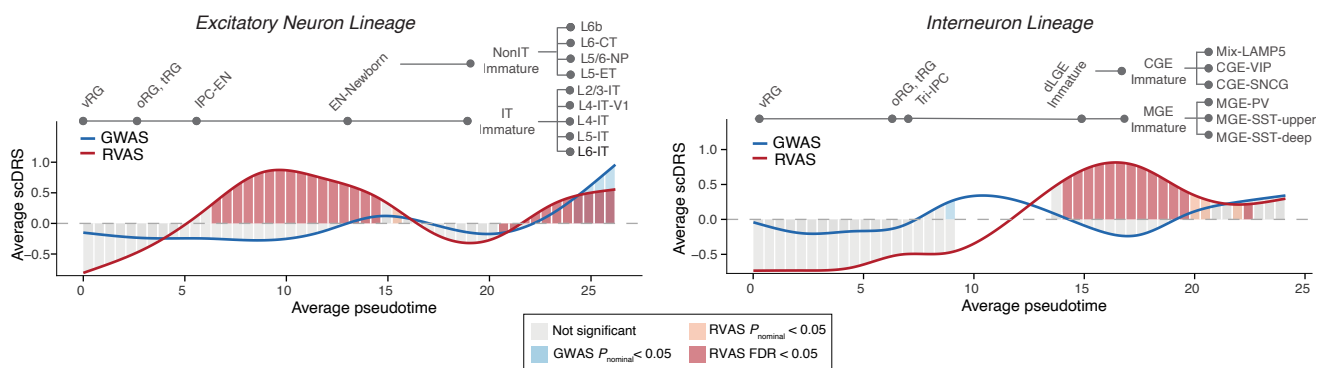

C Single-cell Disease Relevance Score (scDRS) enrichment

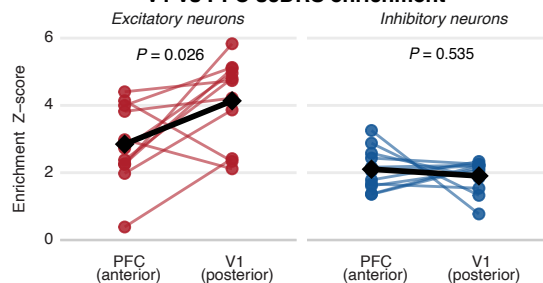

D ASD genetic burden by neuronal lineage

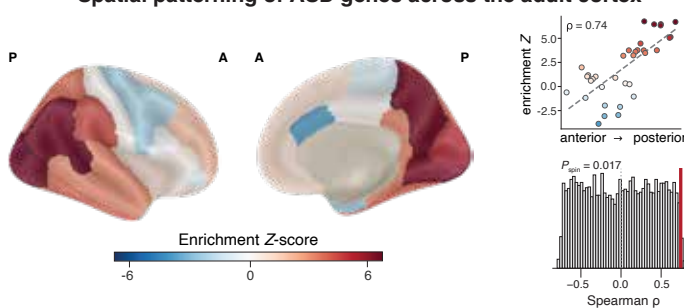

E Pseudotime enrichment by cell class

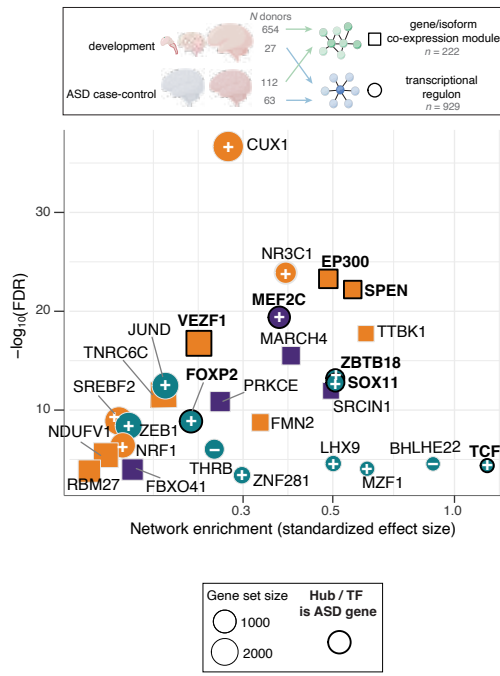

F V1 vs PFC scDRS enrichment

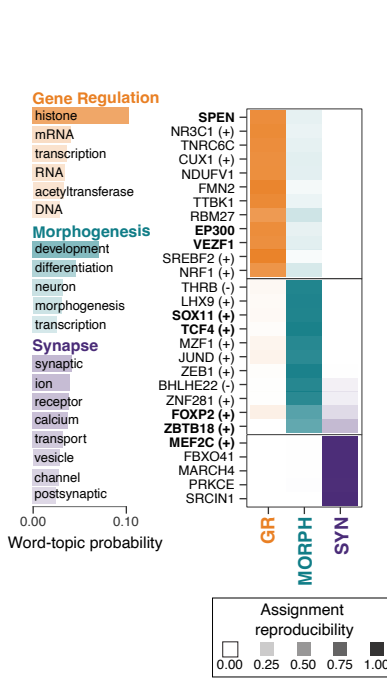

G Spatial patterning of ASD genes across the adult cortex

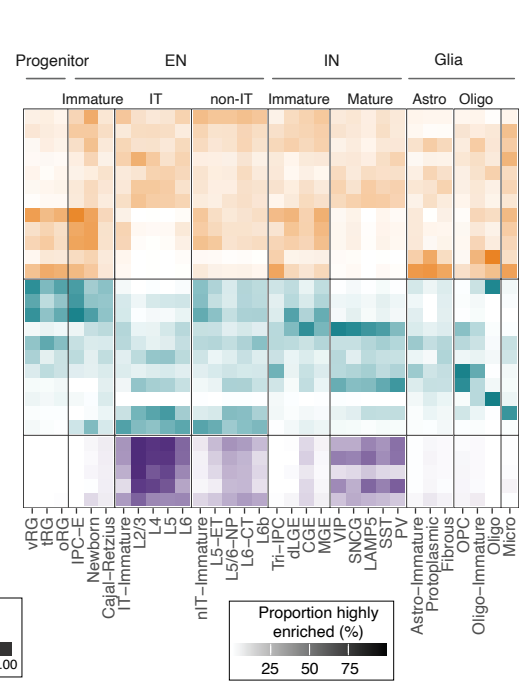

A ASD-associated developmental regulatory modules

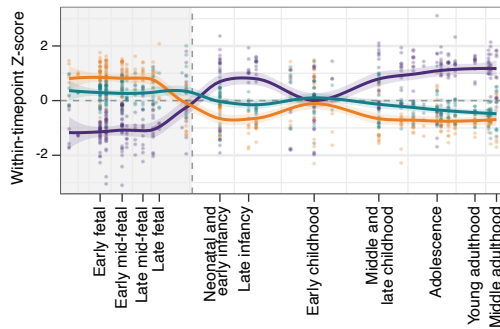

B Module topic modeling

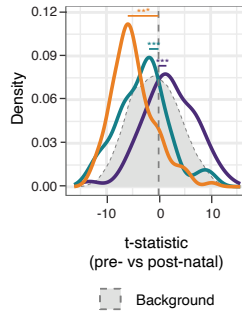

C Module enrichments by cell type

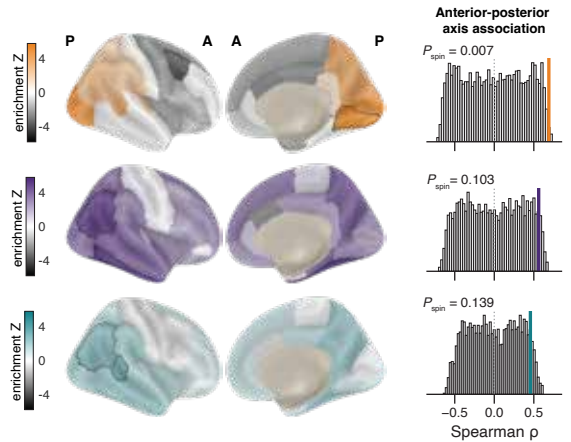

D Developmental expression trajectories of ASD genes by program

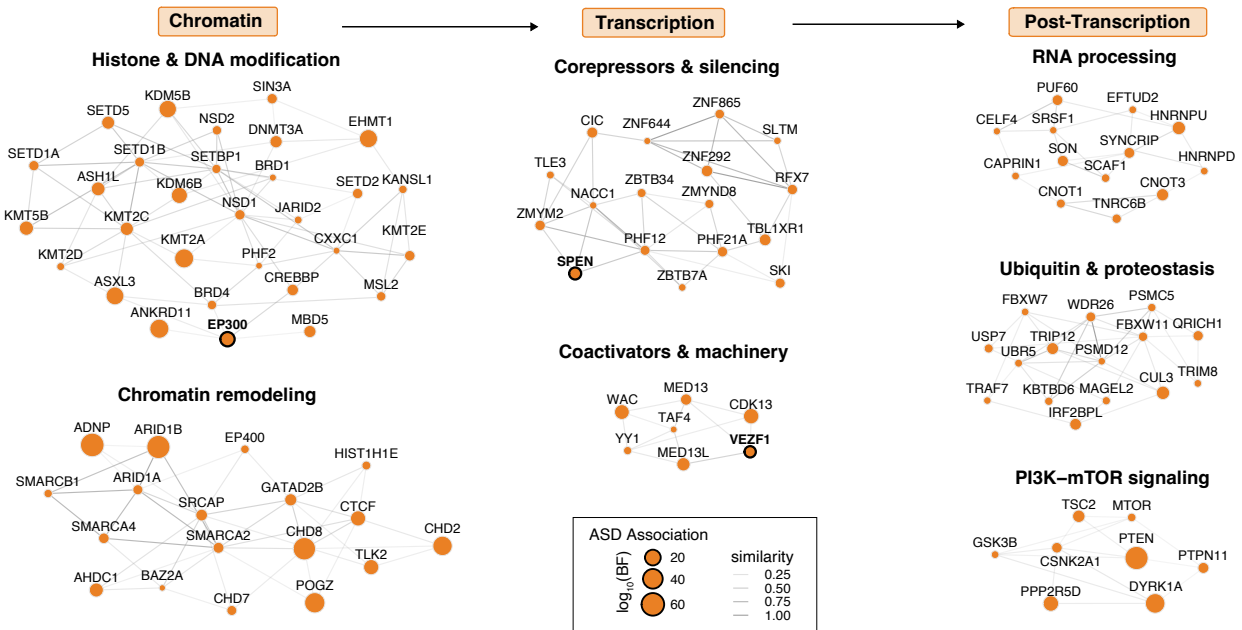

E Pre- and postnatal bias of ASD genes by program

F ASD programs show regional cortical patterning

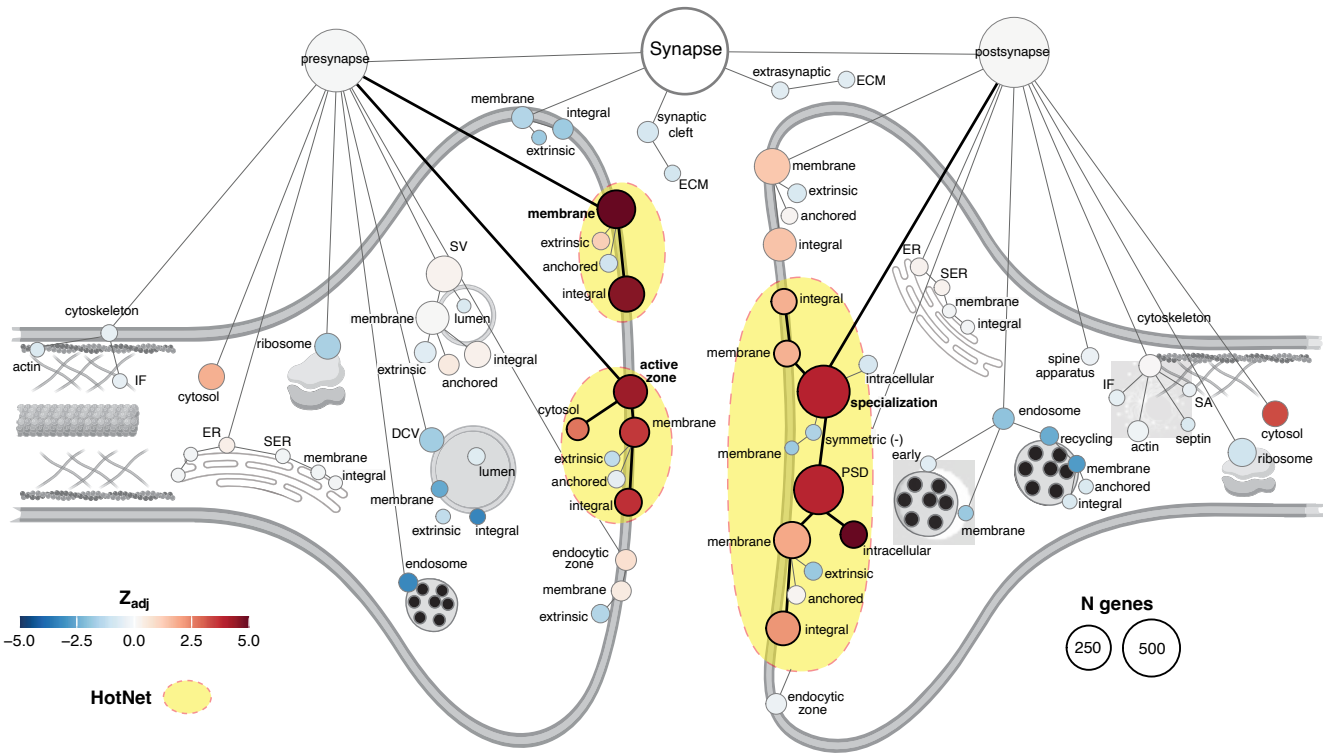

G Gene Regulation (GR) network functional subclusters of ASD genes

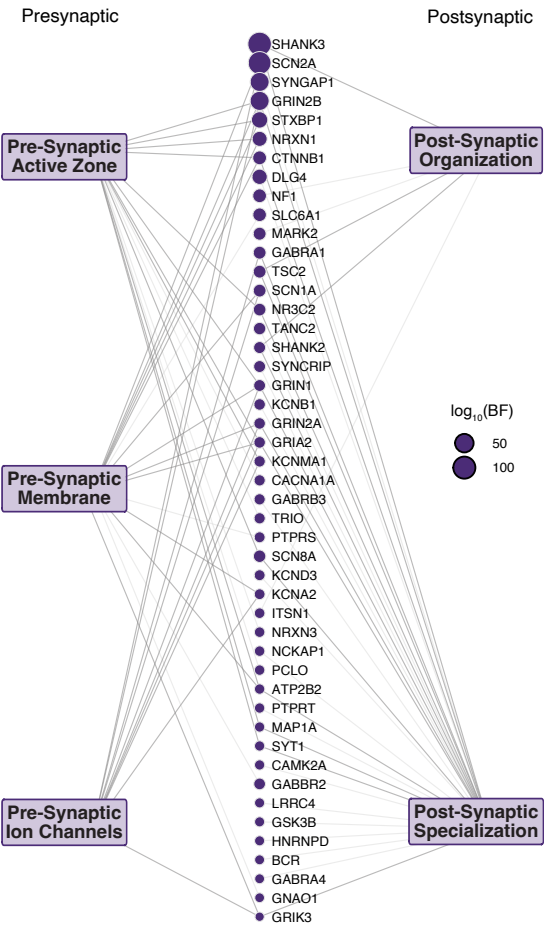

A

Synaptic compartment ASD genetic enrichments

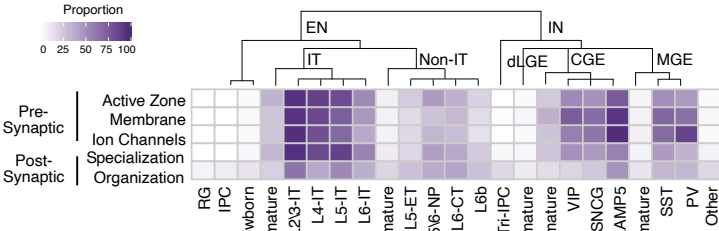

B

ASD genes within pre- and post-synaptic HotNets

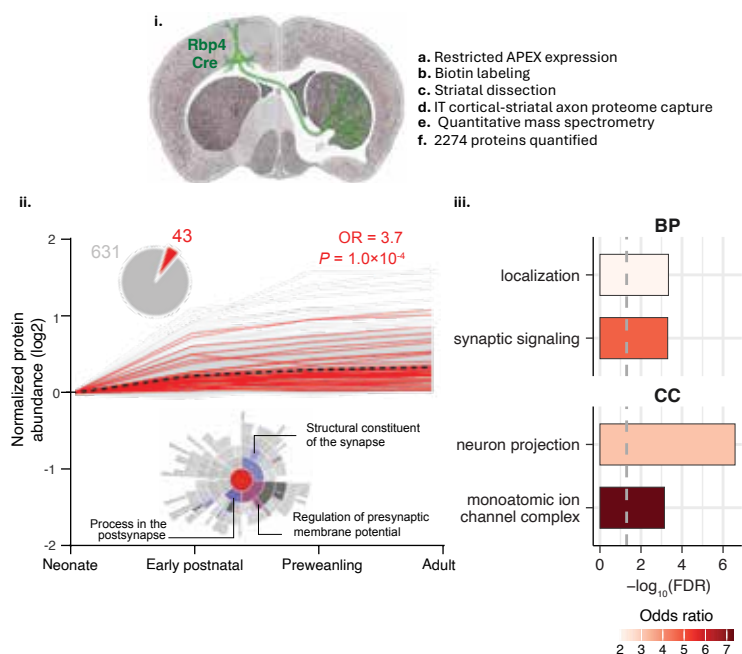

C

Cell-type associations for ASD synaptic HotNets

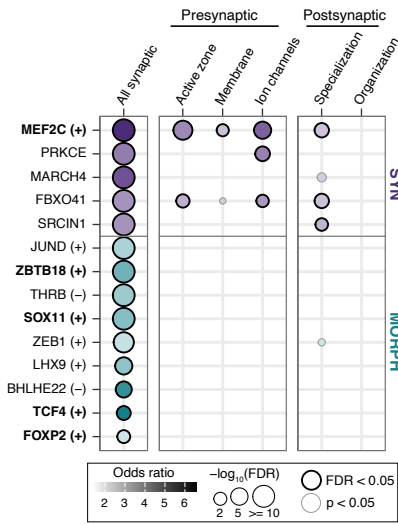

D

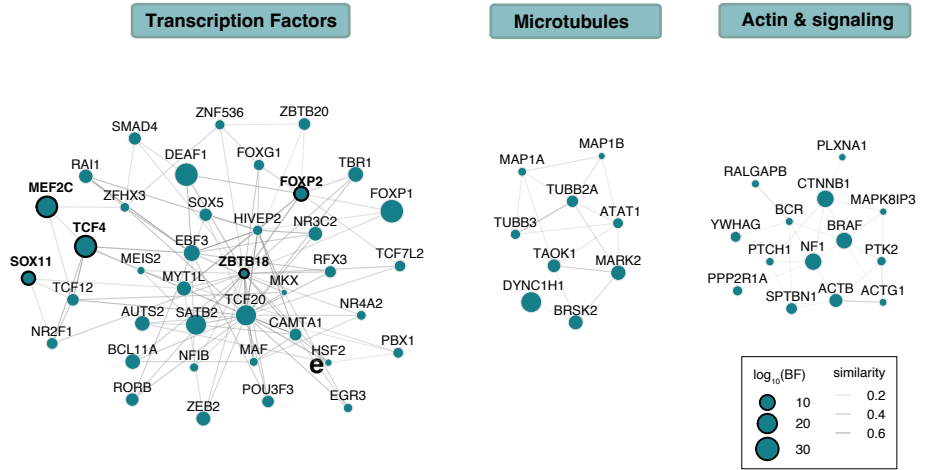

Pre-synaptic proteomics implicates cortico-striatal circuits

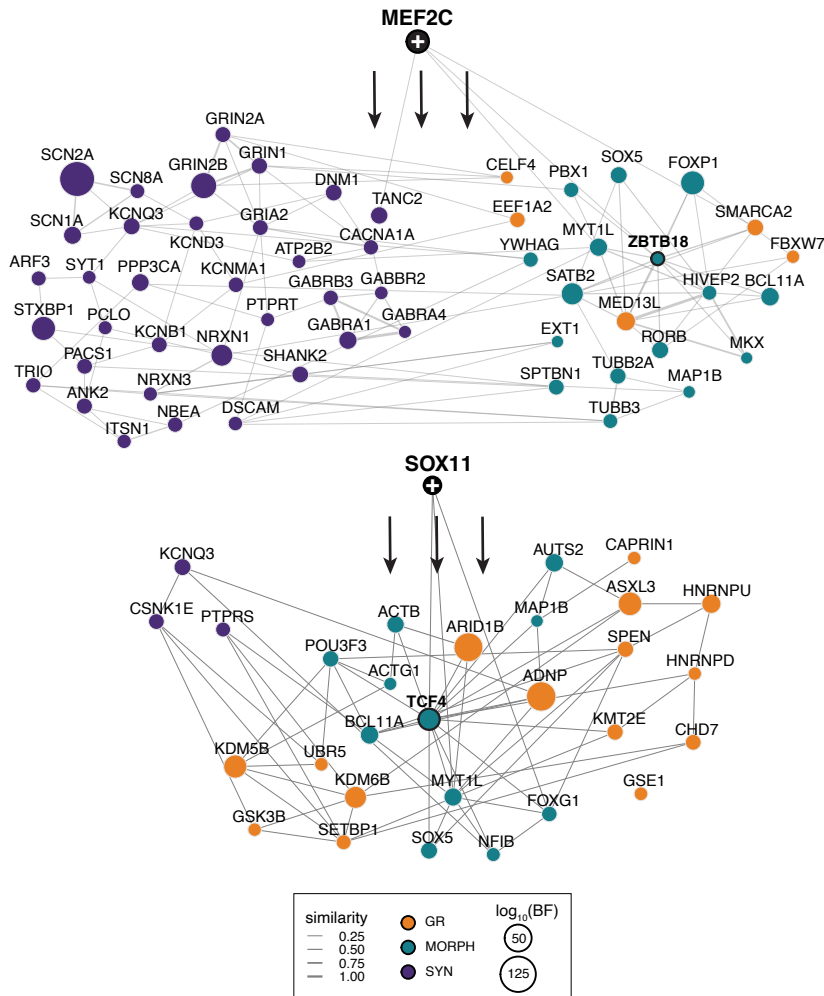

A MORPH links transcriptional regulation to synaptic localization

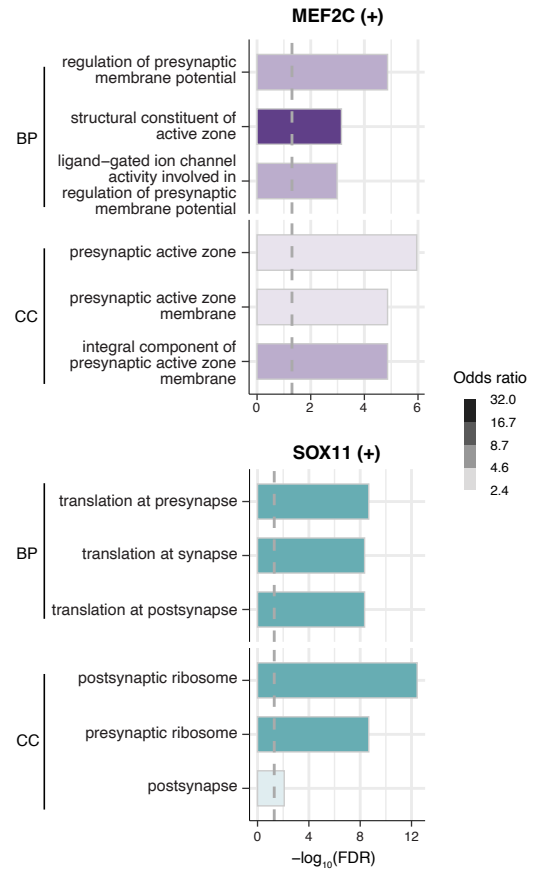

B MORPH functional subclusters of ASD genes

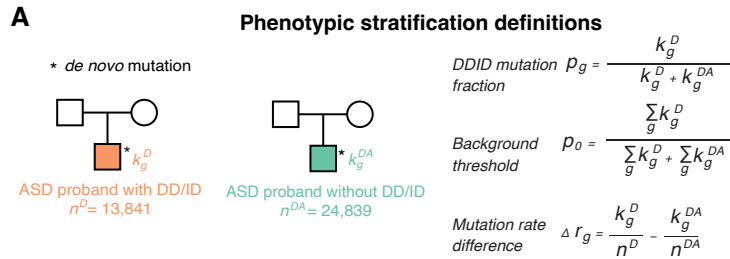

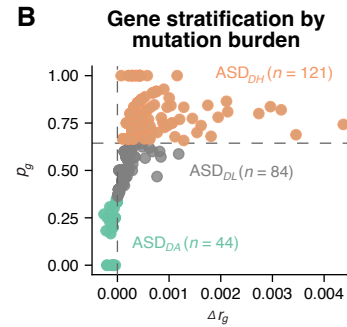

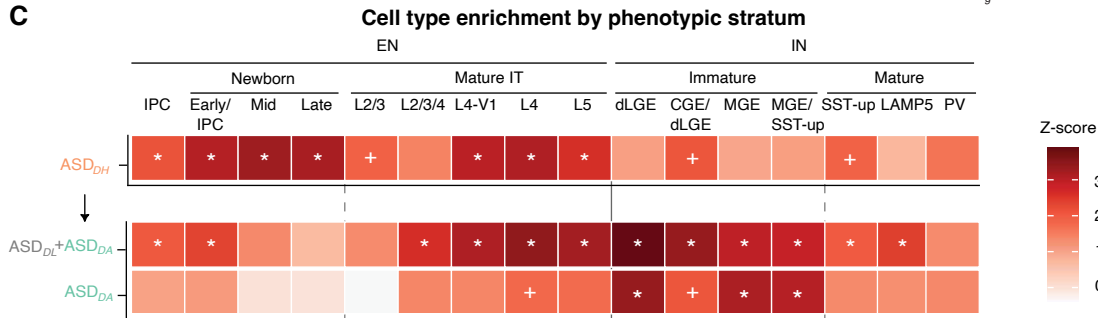

C ASD genes regulated by ASD transcription factors

D ASD transcription factor regulon SynGO enrichments

A**B****C****D**
